# 1.2P: Preparing for OOP – Answer Sheet

The screenshots of my assignment:

```csharp
Message myMessage, messages;
myMessage = new Message("Hello World — from Message Object");
myMessage.Print();
Console.ReadLine();
```

```csharp
Message[] messages = new Message[5];
string[] names = { "Nguyen", "Chau", "Nhi", "Phuc"};

messages[0] = new Message("Welcome Back!");
messages[1] = new Message("What a lovely name");
messages[2] = new Message("Great name");
messages[3] = new Message("Oh hi!");
messages[4] = new Message("That is a silly name");

Console.WriteLine("Enter Your Name: ");
string name = Console.ReadLine();
name = name.ToLower();

if (name == "Nguyen")
{
    messages[0].Print();
}
else if (name == "Chau")
{
    messages[1].Print();
}
else if (name == "Nhi")
{
    messages[2].Print();
}
```
